NeuropathicRx

- ◆ Simple formulation of Alpha-Lipoic Acid, an antioxidant, proven to provide neuropathy relief
- ◆ Synergistic improvements in symptoms when taken with the prescription drug Gabapentin

Who Needs NeuropathicRx?

Patients who suffer with small-fiber neuropathy, particularly those with diabetic peripheral neuropathy symptoms, will experience the greatest benefit taking **NeuropathicRx**.

Small-fiber and diabetic peripheral neuropathy symptoms include numbness, tingling, pins & needles, burning sensation, or pain in the extremities, and most often the feet.

How Does It Work?

The nerve dysfunction associated with neuropathy is thought to be a result of free-radical mediated oxidative stress. There is scientific evidence indicating Alpha Lipoic Acid (ALA) as a powerful antioxidant can prevent the neurovascular abnormalities associated with neuropathy.

What Other Benefits Are There?

Many! Chronic inflammation is often the root cause of disease process, instigated by free-radical damage. Potent antioxidants when introduced to body tissues help ravage these free radicals.

NeuropathicRx is not only effective at helping to mitigate central nervous system diseases, but has also demonstrated success in balancing the metabolism, managing weight, removing heavy metals from the system, and preventing pregnancy abnormalities. There are no reported side effects to supplementing with ALA.

Ingredients:

100 mg Alpha-Lipoic Acid per capsule

Dosing: 1 capsule on an empty stomach (at least 30 minutes before eating) or 2 hours after eating, 3 times a day.
