Active Mobility

◆ Blend of powerful ingredients backed by research to reduce pain and inflammation

Who Needs Active Mobility?

Those suffering with musculoskeletal or joint pain, systemic inflammatory conditions and autoimmune disorders, rheumatoid or psoriatic arthritis, lupus, fibromyalgia, even obesity, heart disease, allergies, or lowered insulin sensitivity will benefit from **Active Mobility**.

What is Inflammation?

"*Inflammation*" has become a health buzz word used to describe the process the body engages in to fight off offending factors. A healthy inflammation response takes place in the presence of a pathogen or injury and then subsides after healing occurs.

When inflammation is chronic -- a common consequence of obesity, stress, poor diet, allergens, and environmental toxins - a broad range of conditions may result from the damage caused by products of the inflammatory cascade.

Your doctor can perform blood tests to screen for markers of inflammation. Even without a test, the ingredients in **Active Mobility** include powerful antioxidants and anti-cancer agents that will provide protection to all the cells in the body.

Research-Backed Ingredients

Half of **Active Mobility** is a proprietary blend of which half is comprised of our **Activated Curcumin**—a highly beneficial & bioavailable formulation of the turmeric plant. The remaining food-derived ingredients have each been studied & selected for their ability to reverse the ill-effects of the chronic inflammation process including *Boswellia serrata*, propolis, green tea, ginger, rosemary, celery, alpha-lipoic acid, trans-resveratrol, and **Phytolens®**, a patented lentil extract.

*Pregnant and lactating women, as well as those taking blood thinners should consult a medical provider before taking.

Dosing: 3 capsules, twice daily *with food*.
