Immunity BoostRx

- ◆ Complete micronutrient supplement blended to bolster the immune response
- ◆ Includes essential vitamins, minerals, antioxidants, co-factors, herbs, & beneficial animal tissue

What is Immunity BoostRx?

Immunity BoostRx is combination multivitamin formulated with immune-enhancing micro-nutrients along with antioxidants and a complex of neonatal bovine organ enzymes and tissues, each of which are shown to have a modulating effect on varying immune responses.

Who needs Immunity BoostRx?

Anyone with a dampened immune response, chronic or acute illness, or auto-immune disease will want to include **Immunity BoostRx** in their daily routine. Certainly, for individuals looking to provide ongoing immune support, this functions as an excellent multi.

Ingredients

Vitamin and Minerals: Vitamins A, C, E, B₁, B₂, B₆, Niacin, Pantothenic Acid, Zinc, Selenium, Copper, Manganese. Each of these are essential micronutrients to support proper immune functioning.

Glandular Tissue: Adrenal complex, thymus, spleen, liver, pancreas, lymph (all neonatal bovine); parotid, placenta (bovine); trypsin, alpha chymotrypsin (porcine). The tissue of newborn animals is unadulterated by environmental factors. Research has indicated oral preparations of thymus extract indeed support the thymus, an important player in the immune system especially when under physical stress. Spleen extract can increase

phagocytic activity (cells that will gobble up offenders). The remaining extracts serve to inhibit inflammatory responses and support the adrenal glands, often taxed by the stress response, as well increase white blood cell production.

Beneficial Co-Factors: (substances that complement the activity of enzymes). Mixed carotenoids are included in **Immunity BoostRx** are well absorbed and have a protective impact on the immune system. CoEnzyme-Q₁₀ is made in the body but production decreases with age. When taken in conjunction with B₆ the production of T4 lymphocytes and immunoglobulin are well supported.

Proprietary Additions: Echinacea root has been shown to increase white blood cell count to battle infections; lactobacillus acidophilus is a probiotic beneficial to gut microflora restoration, where much of our immune functioning resides.

Recommended Dose: Take 2 capsules daily
